$f(x)$ Functions

```
function output = functionName(input)
    ...
end
```

A wise programmer does not write the same spell twice; they turn it into a function and summon it whenever needed.

Reusability – Write once, use it many times.

Modularity – Break a complex program into smaller, manageable parts.

Readability – Make code easier to understand and follow.

Maintainability – Fix or update one function instead of changing the same code everywhere.

Let's Code!

The Wanderer

EXAMPLE 3,0 | Bisection Function

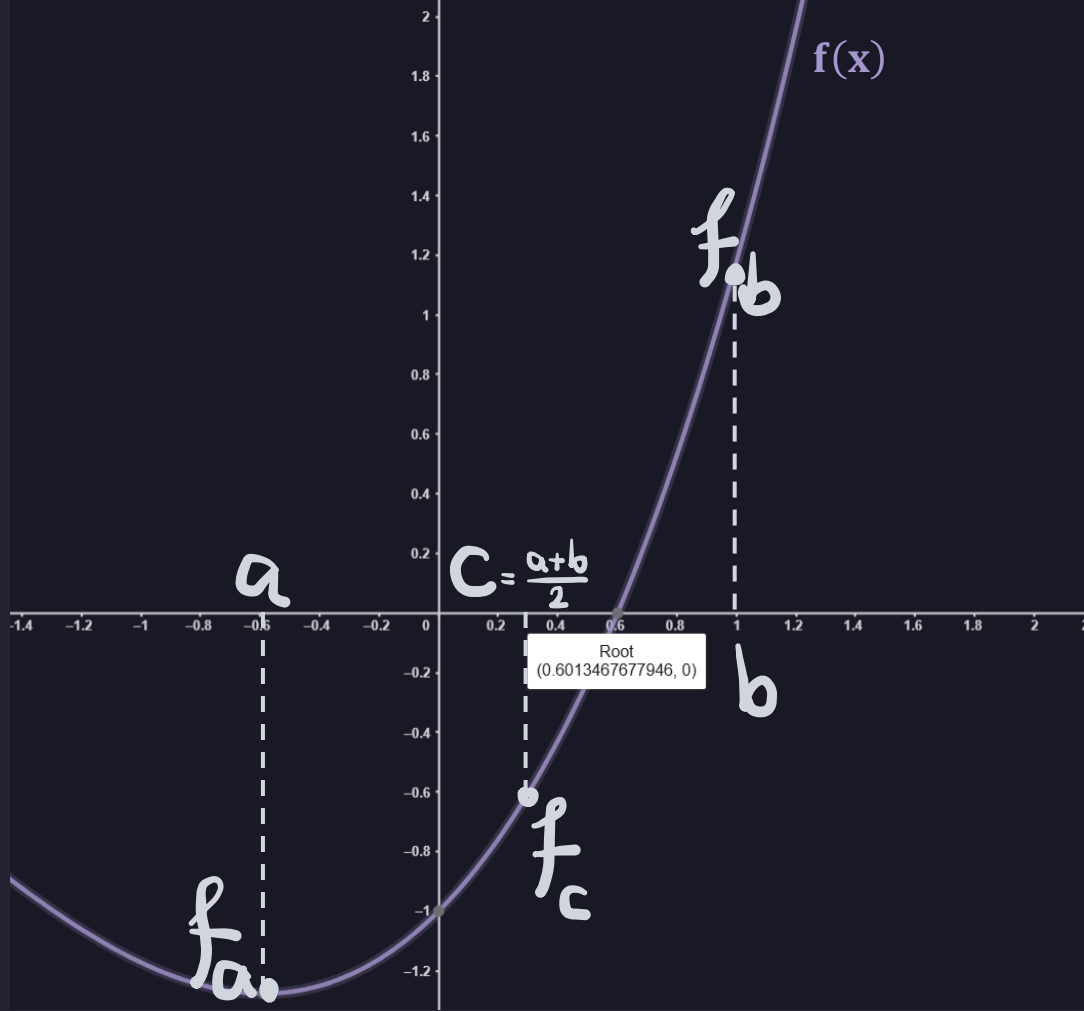

$$C = \frac{a+b}{2}$$

loop

$$f_a \cdot f_c < 0 \rightarrow b := c$$

$$f_b \cdot f_c < 0 \rightarrow a := c$$

$$\Rightarrow x = C$$

File Access Modes

Mode	Description
'r'	Read - Open file for reading only (file must exist)
'w'	Write - Open/create file for writing; overwrites existing content
'a'	Append - Open/create file for writing; appends to the end (preserves existing content)
'r+'	Read + Write - Open existing file for both reading and writing
'w+'	Read + Write - Create/overwrite file for both reading and writing
'a+'	Read + Append - Open/create file for reading and writing; writes at the end

The End!

THANKS!
